DETAILED ACTION

Claim Objections

1. Claims 1 and 5 are objected to because of the following informalities:
 - “mutually different electro-conductivities” in claim 1 should be “different electro-conductivities,”
 - “the organic layer” in claim 1 should be “the liquid crystalline organic layer”
 - “mutually different alignment states” in claim 5 should be “different alignment states”;

Appropriate correction is required.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2, 4-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Yasuda et al. (US5654784).

In regard to claims 1-2 and 4, Yasuda et al. teach (col. 32 lines 27-64, claims 8 and 9) a conductive liquid crystal device comprising: a pair of oppositely disposed

Art Unit: 2871

electrodes (planar conductor) and a liquid crystalline organic layer disposed between the electrodes,

wherein

- the organic layer has plural regions having different threshold voltage, thereby different electro-conductivities according to claim 1 and 4;
- said plural regions have different alignment states in fine domains of liquid crystal molecules according to claim 2.

In regard to claim 5 and 6; Yasuda et al. teach (col. 32 lines 27-64, claims 8 and 9) a conductive liquid crystal device which includes a pair of oppositely disposed electrodes and at least two organic layers disposed between the electrodes, wherein said at least two organic layers include at least one liquid crystalline organic layer having plural regions of different electro-conductivities resulting in different luminances (transmittance) of luminescence from the device (col. 32 lines 39-43).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yasuda et al. (US5654784) as applied to claims 1-2.

It is conventional that the alignment states of liquid crystal molecules have formed by UV or laser light irradiation.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Yasuda et al. (US6040884A) disclose the liquid crystal devices comprising a multitude of domains having different threshold voltages for switching liquid crystals.

Itoh et al. (US6094252A) disclose a GH LCD utilizing a helical structure of liquid crystal layer, hysteresis is caused in dependency of a light reflectance on an applied voltage and domains are formed in a liquid crystal layer, depending upon a twist angle and a pretilt angle.
